

Easy Trade[®] Web

Easy Trade[®] Web is IT Software's trading on line solution. It exploits Easy Trade[®] platform's financial and technological know-how, stability and scalability.

Easy Trade[®] Web assures trade management flexibility, a wide range of interfaces for back office and risk management systems and a constant evolution of new markets access and the implementation of new functionalities for already connected markets as well. The product can be easily complemented and personalized, and it is able to satisfy the requirements of the most innovative financial institutions.

Easy Trade[®] Web is based on a scalability structure that supplies to on-line clients the main Easy Trade[®] trading functionalities. The product is able to support thousands of simultaneous user connections, many market gateways, advanced trading functionalities and real-time data-feed distribution.

Easy Trade[®] Web has been designed to be easily integrated within other web banking solutions. Trading functions, position management functions and market data-feed functions can be easily integrated with other contents to build a tailor-made web solution suited to the needs of bank customers.

Functional wealth and easy integration

Easy Trade[®] Web has a wide range of portfolio's management and reporting functions. Besides, the use of component-based technology permits an easy implementation of new value added services and functionalities, like asset allocation solutions, without interfering with those already existing.

Easy Trade[®] Web is the only on line trading system that implements a real-time evaluation of margins on derivatives portfolios according to the algorithms applied by the Derivatives Exchanges.

Easy Trade[®] Web is a multi-channel and multi-market on line trading platform that offers an ideal and flexible instrument to the Bank, to create added value through a client fidelity program.

Using Easy Trade® Web, the bank can provide to its users the possibility to trade on all markets supported by Easy Trade® Order Management System (more than 60 exchanges, ECNs, MTFs on different asset classes: equities, derivatives and bonds).

Thanks to its innovative technology, Easy Trade® Web permits to support different browser access channels with both HTML and Java interfaces, up to the newest and sophisticated communication equipments such as the latest mobile phones or pocket pc.

Easy Trade® Web allows offering to the bank's user a wide range of functionalities, such as:

- *Price information, Market's warnings and the second level real-time data-feed, available both in snapshot mode and through push technology;*
- *The graphic representation of the historical and intra-day security trend, with technical analysis packages;*
- *A disposal functionality, to enter and cancel (even multiple cancellation) the orders, with different market parameters as supported by market interfaces;*
- *A monitoring report of the order status;*
- *A portfolio's position keeping report, with the details of positions in each security, both detail and global P&L;*
- *A charting tool to plot both intraday and historical charts.*

Any other information can be easily complemented starting from the services offered from different Content Providers available on the market.

An open architecture with an high potential

Easy Trade® Web is based on a multilevel Client/Server architecture designed and optimized to supply an efficient on-line operability and to support high operational peaks.

Easy Trade® Web is developed with cutting edge technology and allows managing high transactional loadings via Internet with an elevated scalability. Its technology assures total portability on different platforms.

The adoption of a multilevel structure permits to disjoin the client access channels and the presentation logic, from the servers that implement the business logic, the data access (personal data, portfolio's data, P&L, operational limits, etc..) and the market access.

The structure itself is suitable to support the different functional requirements of the remote users connected via Internet/intranet/extranet (such as retail clients, agencies, promoters), as well as the continuous evolution of business requirements, with reference to new access channels and new Markets.
